

ENVIRONMENTAL MANAGEMENT EUROFINSA

EUROFINSA S.A., as stated through its Management Policy, is committed to the reduction of the impact produced by the consumption and waste generated by its activity.

To this end, EUROFINSA S.A. identifies and evaluates environmental aspects, both in the office and in the construction works, addressing particularly the most relevant issues (depending on their origin, size or impact on the environment) and planning specific controls over them, quantifying and trying to minimize the quantities generated and to manage the resulting materials as environmentally respectfully as possible.

Over the last year, the company managed to reduce by 9% the energy invoicing at its headquarters in comparison to the previous year. It was possible thanks to the workers' awareness and actions, periodic inspections and the replacement of luminaires with their LED equivalents.

All the paper wasted is segregated by the workers in specific containers and recycled by a company that has been specifically accredited as the manager of this waste.

Likewise, waste toner and ink cartridges are collected by an authorised company, with the aim to be recycled and recovered.

Construction and demolition wastes of construction works are collected by authorised transporters and delivered to centers equipped for managing. However, when it is possible, the recovery and reuse of land for filling localised spaces is promoted.

In order to guarantee adequate performance, EUROFINSA S.A. evaluates the legal environmental requirements in effect, providing to the subcontractors, before starting their activity, the necessary informative documentation to carry it out in an environmentally respectful manner.

Moreover, EUROFINSA S.A. has a "NIMA" (by the Spanish acronym, Environmental Identification Number) for every work centre as Small Generator of Hazardous Waste. Hence, particularly polluting waste can be adequately managed and recycling actions can be properly implemented.

This kind of waste, such as WEEE (Waste of Electric and Electronic Equipments: RAEE, by the Spanish acronym), batteries, discarded equipment containing fluorinated gases, contaminated packaging, oil or rags, is periodically collected by authorised waste management companies. Hence, its collection, transportation, storage and delivery to final manager allow, accordingly, the possibility of recovering the waste and expanding its useful life.

These measures have allowed EUROFINSA S.A. to prove its commitment to the Environment through the certification of its Management System under the ISO 14001 standard.

EUROFINSA S.A. actively promotes that all interested parties are aware of this commitment and take an active part. Hence, the necessary communication is encouraged to strengthen environmental care through cooperation.
